

Product CERIF mapping

https://openaire-guidelines-for-cris-managers.readthedocs.io/en/v1.1.1/cerif_xml_product_entity.html

Definitions

```
header = normdoc / part[name='record'] // header
```

```
knew_long = normdoc / part[name='record'] // metadata / normalized / knew_long
```

Internal Identifier

```
header / identifier
```

Type

```
knew_long // genre
```

For now, always 'dataset (http://purl.org/coar/resource_type/c_ddb1)'

Once subtype 'software' is provided, map those to 'software (http://purl.org/coar/resource_type/c_5ce6)'

Language

```
knew_long // language
```

Name

```
knew_long // titleInfo / title
```

Some `titleInfo` have a `xml:lang="en"` attribute, but this is always a duplicate of the title without `xml:lang`.

Use the `titleInfo` without `xml:lang` attribute.

VersionInfo

not recorded

ARK

not recorded

DOI

```
knew_long // publication_identifier[@type='doi']
```

Handle

```
knew_long // publication_identifier[@type='hdl']
```

URL

```
knew_long // publication_identifier[@type='purl']
```

URN

```
knew_long // publication_identifier[@type='nbn']
```

Creators

Narcis doesn't record the PRS identifiers of the authors in `knew_long`. If a `nameIdentifier` is given in `knew_long`, we could do a lookup in VSOI and add the PRS identifier. Only then can we add the authors to this CERIF format.

Narcis aggregates and doesn't have a PRS identifier for each person that is listed as author.

Publishers

No identifier available to link with.

License

`know_long // rightsDescription`

- *Not sure if this element can be added though. (1) I haven't seen it in use yet in the `know` store and (2) I'm not sure if we can offer both a `value` and a `scheme` for this.*
- *Can we map our values to the expected scheme? <https://www.openaire.eu/cerif-profile/vocab/LicenseTypes#>*

Description

`know_long // abstract`

Subject

Probably not recorded, but also there is no clear documentation or examples on what kind of values/URLs are expected here.

Keyword

`know_long // subject / topic / topicValue`

(might be that part of these belong in Subject, but as long as they don't have a URL, we can't do anything with it)

PartOf

not recorded

Originates

This would require a link between these publications and the project(s) or funding(s) they originate from. Although some `grantAgreements` are provided in `know_long`, I'm not clear on whether we have a 'referential transparent identifier' pointing to that funding.

GeneratedBy

Narcis doesn't record any `Equipment` information that would be required for this entry.

PresentedAt

Narcis doesn't record any **Event** information that would be required for this entry.

Coverage

Narcis doesn't record any **Event** information that would be required for this entry.

References

Not recorded

ns4:Access

knew_long / accessRights

mapping:

knew_long	CERIF
openAccess	open access (http://purl.org/coar/access_right/c_abf2)
embargoedAccess	embargoed access (http://purl.org/coar/access_right/c_f1cf)
restrictedAccess	restricted access (http://purl.org/coar/access_right/c_16ec)
closedAccess	metadata only access (http://purl.org/coar/access_right/c_14cb)
